

## Chemistry Syllabus for BS / BSC / Masters / MPhil

### Instructions:

The objective of “Champion of Subject” is to test the conceptual abilities of the students and candidates regarding the subject.

- This is the comprehensive syllabus for the “Champion of Subject”.
- Candidates are advised to thoroughly go through and study the syllabus
- The test will comprise of 120 MCQs.
- The time allowed for the test will be 120 min.
- MCQs will cover part or all the syllabus mentioned below.
- Munzill reserved the right to conduct an online or physical test.

---

### *ATOMIC STRUCTURE AND QUANTUM CHEMISTRY*

---

- Electromagnetic spectrum
- Photoelectric effect
- Bohr’s atomic model
- Wave and particle nature of matter
- De Broglie’s equation
- Heisenberg’s uncertainty principle
- Wave functions and Born interpretation of wave functions
- Probability density
- Schrödinger wave equation and its solution for the particle in one and three-dimensional boxes.

---

### *ELECTROCHEMISTRY*

---

- Ions in solution
- Measurement of conductance and Kohlrausch’s law,

- Mobility of ions and transport number
- Debye-Hückel theory and activity coefficient
- Redox & Spontaneous reactions
- Electrochemical cells
- Standard electrode potentials
- Liquid junction potential
- Nernst's equation
- Measurement of pH
- Electrolytic cells

---

## *THERMODYNAMICS*

---

- Equation of states
- Ideal and real gases
- The van der Waals equation for real gases
- Critical phenomena and critical constants
- Four laws of thermodynamics and their applications
- Thermochemistry
- Heat capacities and their dependence on temperature, pressure and volume,
- Reversible and non-reversible processes,
- Spontaneous and non-spontaneous processes,
- Hess's law, The Born-Haber cycle, relations of entropy and Gibbs free energy with an equilibrium constant, Gibbs Helmholtz equation, fugacity and activity.

---

## *CHEMICAL KINETICS*

---

- The rate and molecularity of reactions
- Factors affecting rate of a chemical reaction,

- Zero, first, second and third order reactions with same initial concentrations,
- Half- lives of reactions,
- Experimental techniques for rate determination and methods for determination of order of reaction (integration, half-life, initial rate and graphical methods),
- Collision theory,
- Transition state theory,
- Arrhenius equation and rate equations of complex reactions.

---

### *SURFACE CHEMISTRY AND CATALYSIS*

---

- Properties of liquids
- Physical and chemical properties of the surface,
- Determination of surface area.
- Adsorption and absorption; physical adsorption and chemisorption,
- Adsorption isotherms,
- Langmuir adsorption isotherm and Freundlich isotherm.
- Colloids; properties, classification and preparation of colloidal systems.
- Surfactants,
- Phase rule; Gibbs equation of phase rule, one component systems, two component systems and their examples,
- Catalysis; homogeneous and heterogeneous catalysis, acid-base and enzyme catalysis.

---

### *FUNDAMENTALS OF CHEMOMETRICS*

---

- Sampling
- Significant figures,
- Stoichiometric calculations,
- Measurement errors,

- Analysis of variance (ANOVA),
- Arithmetic mean, median,
- Mode, standard deviation/relative standard deviation, confidence limits, Gaussian distribution, least square method, Statistical tests.

---

## *SEPARATION METHODS*

---

- **Solvent extraction;** theory of solvent extraction; solvent extraction of metals, analytical separations, multiple batch extraction and counter-current distribution.
- **Chromatography;** theory of chromatography, classification and overview of chromatographic techniques (paper, thin layer, column and ion exchange chromatographies). Principle of electrophoresis and its application as separation and characterization of proteins.

---

## *BASIC INORGANIC CHEMISTRY*

---

- Types of chemical bonding
- Theories of chemical bonding,
- Valence bond theory (VBT),
- Hybridization and resonance,
- Prediction of molecular shapes using valence shell electron pair repulsion (VSEPR) model,
- Molecular orbital theory (MOT) applied to diatomic molecules,
- Delocalized approach to bonding,
- Bonding in electron-deficient compounds,

- Physical and chemical properties of p-block elements with emphasis on oxygen, carbon, chlorine, silicon, nitrogen, phosphorus and some of their representative compounds.

---

### *ACIDS AND BASES*

---

- Brief concepts of chemical equilibrium
- Acid-base theories including soft and hard acid and base (SHAB) concept,
- The relative strength of acids and bases,
- Significance of pH, pKa, pKb and buffer solutions
- Theory of indicators, solubility, solubility product, common ion effect and their industrial applications.

---

### *BASIC CONCEPTS OF ORGANIC CHEMISTRY*

---

- Bonding and orbital hybridization,
- Localized and delocalized bonding,
- Inductive effect,
- Dipole moment,
- Resonance

---

### *SATURATED AND UNSATURATED HYDROCARBON*

---

- Nomenclature
- Physical properties
- Preparation and reactions of alkanes, alkenes and alkynes.

---

## *CHEMISTRY OF AROMATIC COMPOUNDS*

---

- Benzene structure
- Aromaticity
- Mechanism of electrophilic substitution reaction
- Activating and deactivating substituents
- Effect of substituents on orientation and reactivity.

---

## *CHEMISTRY OF FUNCTIONAL GROUPS*

---

- Preparation and properties of alcohols, phenols, ethers, and amines with focus on reaction mechanism and applications
- Preparation and reactions of alkyl halides
- Synthetic applications of Grignard reagent
- Carbonyl compounds, preparations and reaction mechanism of aldehydes and ketones and their applications
- Carboxylic acids and their derivatives, acidity of carboxylic acids and effect of substituents on their acidity, preparation and reactions of carboxylic acids and their derivatives including acid halides, acid anhydrides, esters and amides.

---

## *ALIPHATIC NUCLEOPHILIC SUBSTITUTION AND ELIMINATION REACTIONS*

---

- Mechanism of nucleophilic substitution reactions
- Elimination reactions
- Zaitsev rule and Hofmann rule

- Competition between Substitution and elimination reactions.

---

## *STEREOCHEMISTRY*

---

- Molecular chirality
- Types of stereoisomers.
- RS and EZ notation.
- Optical activity, Stereoselectivity and stereospecificity
- Resolution of racemic mixtures.

---

## *ORGANIC SPECTROSCOPY*

---

- Theory, Principle, instrumentation and applications of UV/Visible, <sup>1</sup>H NMR, IR and Mass spectroscopic techniques.

---

## *BIOMOLECULES*

---

- **Carbohydrates;** Monosaccharides, oligosaccharides and polysaccharides, biological functions of starch, glycogen, cellulose, and cell wall polysaccharides.
- **Lipids;** Classification and biological importance of lipids. Significance of lipids in biological membranes and transport mechanism.
- **Amino Acids;** Chemistry and classification of amino acids. Physical and chemical properties. Biological significance.
- **Proteins;** Classification. Properties and biological significance. Primary, secondary tertiary and quaternary structures.

- **Nucleic Acids;** Chemical composition of nucleic acids. Structure and biological significance of nucleic acids.
- **Enzymes;** Enzyme-substrate interactions and nature of the active site, mechanism of enzyme action, the kinetics of single substrate reactions, enzyme inhibition, regulatory enzymes and allosteric enzymes.

---

## *METABOLISM*

---

- **Digestion;** absorption and transport of proteins, carbohydrates, lipids and nucleic acids. Glycolysis; citric acid cycle, gluconeogenesis, glycogenesis, glycogenolysis and photosynthesis.
- **Biosynthesis** of triglycerides, phosphides, steroids and bile acids and ketone bodies.
- **Biochemical reaction of amino acids:** decarboxylation, deamination, transamination and transmethylation, etc., urea cycle, creatine and uric acid synthesis.
- **Catabolism** of nucleosides, DNA polymerases and other enzymes involves in metabolism.

---

## *CHEMICAL INDUSTRIES*

---

- Manufacturing and processing of sugar, cement, glass, paper, fertilizers, soap and detergents.
